

Visualisations:

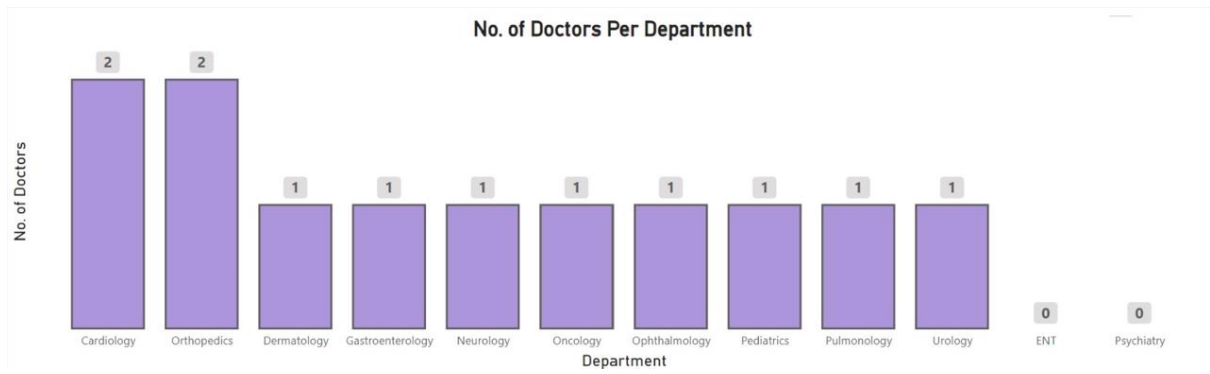

This bar chart represents the frequency of various purposes for medical appointments. Routine checkups are the most common reason, while all other purposes like consultation, vaccination, post-operative checkups, health screening, follow-ups, emergency consultations, consultations for surgery, and annual physical exams occur with equal frequency.

The bar chart displays the ages of 12 patients, identified by unique patient IDs. The oldest patient is 52 years old (PT004), and the youngest is 26 years old (PT007), showing a range of adult ages among the group.

The bar chart shows the status of rooms, with the majority being occupied (5 rooms). There are an equal number of available and vacant rooms (3 each), and only 1 room is under maintenance.

The bar chart illustrates the number of doctors in various medical departments, with Cardiology and Orthopedics having the highest count at two doctors each. ENT and Psychiatry currently have no doctors, while all other listed departments have one doctor each.
